

Economic Benefits to Hospitals / Clinics

- **Scanner throughput up to 5000 per year (<15 min / patient test)**
 - Just \$300 per test yields \$1,500,000 revenue
- **Improved worker productivity** (less lost time out of office)
- **Catch disease earlier while amenable to aggressive medical therapy**
- **Faster turnover of beds** (avoid ER overcrowding),
 - more efficient use of resources
- (Capture more **DRG value**)
- Increase **Cathlab Volume**, especially with patients needing intervention
- Keep lower risk cardiology patients from being sent to another hospital
- **Avoid litigation** (inadvertent discharge of patient with MI)

OVERVIEW

- **Magnetocardiography (MCG)**: a **sophisticated new technology** that provides unique and valuable information about heart function in a safe and **Radiation-Free Patient and Physician** environment.
 - The technique relies on analyzing magnetic fields generated by the heart's electrical activity and quantitatively measuring dynamic behavior of ventricular repolarization.
 - Using this information a physician can determine the earliest of risk that a patient might have coronary artery disease and -- for some patients -- the relative risk of sudden cardiac death.
- MCG creates a **New Market Space** in large Cap-Ex Area of Cardiac Diagnostics to significantly and favorably impact HealthCare Costs
- MCG Complements and adds to Existing Technology
- CARDIOMAG, is considered to be a **unique investment opportunity** that has the potential for short-term and long term profitability
- CARDIOMAG may also be an attractive partner
- Most importantly, CARDIOMAG is offering complementary technology to **improve Cardiac Health Care Around The World and Save LIVES**
